

# VR Breathing

Group 5: Breadth of the Wild

Presenters: Viva Laas, Jiamian Wang, Jinheng Zhang, and Minghao Zhao

A dark blue diagonal gradient bar that starts from the bottom left and extends towards the top right, covering the lower half of the slide.

# Introduction

Figure 6: Breathing actions and their mapping on to the Vive hand controller's trackpad.

- We chose the VR Breathing project
- This project focuses on the use of breath to interact with different objects such as bottles, a candle, flames, etc.
- We wanted to help improve this project to help people focus on breathing and help with the visualization of breathing.

# Motivation

- Giving people a different alternative sense to help learn their breathing patterns and habits
- Aid people with visualizing their breathing in order to improve their performance on breathing exercises

# Related Works – Google Breathing Exercise

- This exercise is useful for focusing on breathing
- It showcases a visual to see when to breathe in and out
- Does not use other senses to help outline what you are currently doing with your breathing

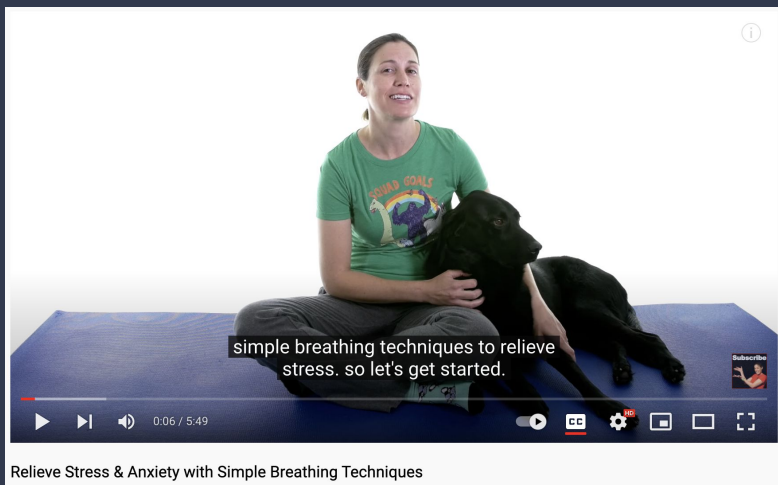

# Related Works – Headspace

- This app and web application is focused on meditation rather than breathing exercises directly
- Does encourage the use of other senses (visual on the ball and placing hand on stomach) not it is not exactly meant for breathing focus

# Related Works – Youtube

<https://www.youtube.com/watch?v=odADwWzHR24>

- There are many youtube videos out there for breathing exercises with instructors who help run them through with you
- These are lovely to have people speak to you and showcase techniques
- Again, these do not showcase your own breathing during the exercise making it harder to evaluate yourself

# Need Finding – Professor

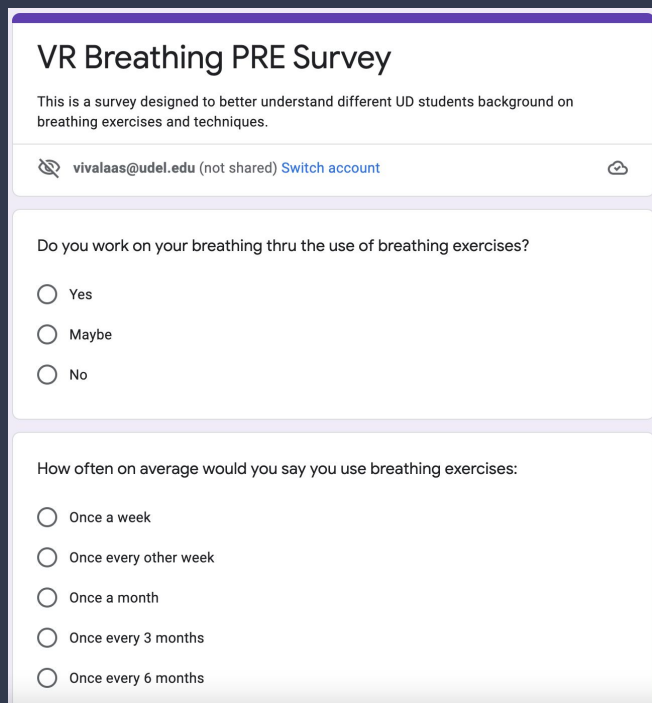

- We utilized the professor for help on coming up with ideas
- Originally we wanted to do a balloon but upon speaking with Professor Barmaski we found no unity assets
- She geared us towards sound which ultimately lead to the idea of breathing visualization aid

# Need Finding – Research Breathing Techniques

- Common breathing techniques are:
- Square breathing (4-4-4-4)
  - Breathe in for 4 seconds, hold for 4 seconds, breathe out for 4 seconds, hold for 4 seconds
- 4-4-8
  - Breathe in for 4 seconds, hold for 4 seconds, breathe out for 8 seconds
- 4-7-8
  - Breathe in for 4 seconds, hold for 7 seconds, breathe out for 8 seconds

# Need Finding – Survey

The image shows a screenshot of a Google Forms survey titled "VR Breathing PRE Survey". The survey description states: "This is a survey designed to better understand different UD students background on breathing exercises and techniques." The user is logged in as "vivalaas@udel.edu (not shared)" with a "Switch account" link. The first question is "Do you work on your breathing thru the use of breathing exercises?" with radio button options for "Yes", "Maybe", and "No". The second question is "How often on average would you say you use breathing exercises:" with radio button options for "Once a week", "Once every other week", "Once a month", "Once every 3 months", and "Once every 6 months".

**VR Breathing PRE Survey**

This is a survey designed to better understand different UD students background on breathing exercises and techniques.

vivalaas@udel.edu (not shared) [Switch account](#)

Do you work on your breathing thru the use of breathing exercises?

☐ Yes

☐ Maybe

☐ No

How often on average would you say you use breathing exercises:

☐ Once a week

☐ Once every other week

☐ Once a month

☐ Once every 3 months

☐ Once every 6 months

- We chose to find more information about UD students point of view via a survey
- Asked basic questions about if students breathing habits in terms of exercises
- Wanted to find what breathing exercise is used most in survey sample to use for implementation
- Also wanted to see if people would be interested in this product

# Need Finding – Survey Findings

On a scale from 1 to 5 how well do you feel that you are in control of you breathing when instructed to breath in and breath out in certain time frames

40 responses

- 40 Responses at the time this presentation was finalized
- It was interesting to see how the scale was changed
- This showcases that there can be a need for this application and the neutral responses may have some interested

Do you think the use of other senses would help you better understand your breathing?

40 responses

# Need Finding – Survey Findings Continued

If given the ability, would you use an application to better understand your actual breathing?

40 responses

- Interesting to see the wide range of breathing exercises people have used
- Basing off this need find we will be choosing to update our breathing exercise to be either:
  - Mimicking the Google Breathing
  - 4-4-8
  - 4-4-4-4

Which of the following breathing exercises have you used before?

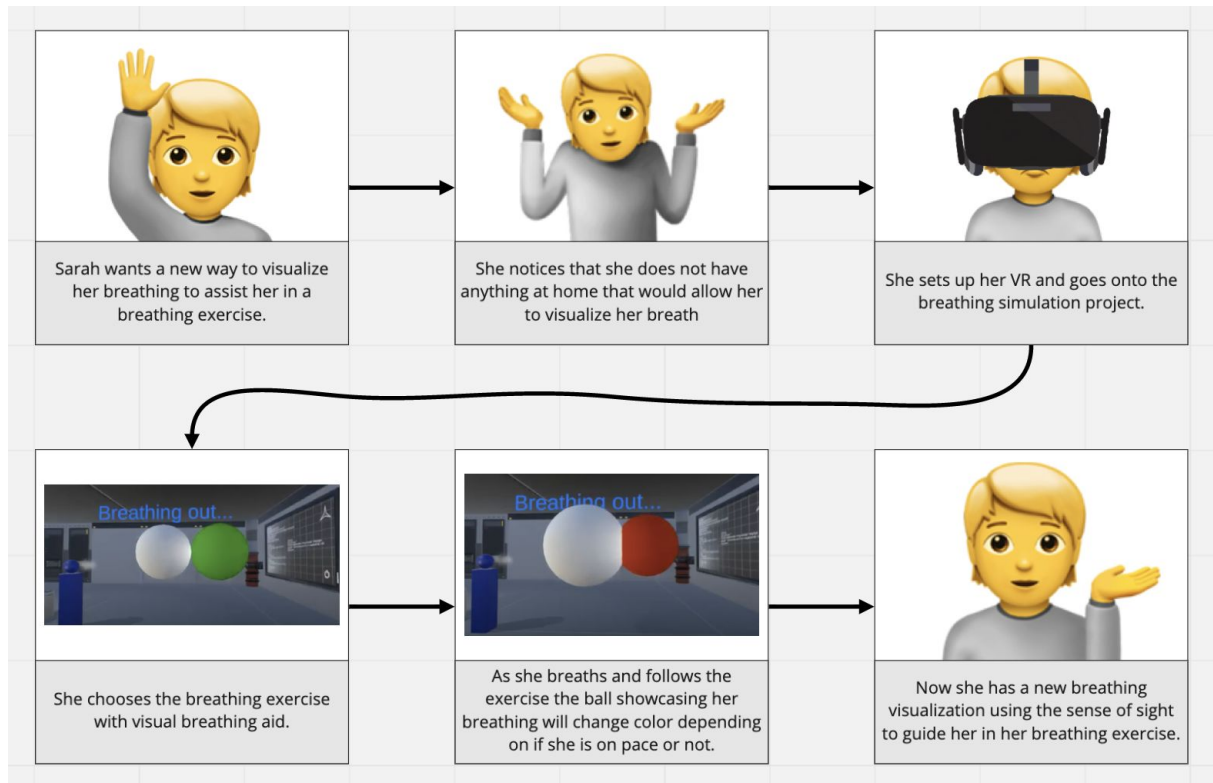

38 responses

# Original Storyboard

# Newest Storyboard

# Design + Development

- Two Visual “Breadth” Balls
  - Show Case
    - Auto Resizing
  - User Controlled
    - Resize on behalf of user control
    - Simulate the Users Breathing
- Color Changing
- Size Matching

Visual Of Current Work

# Feature Additions – Currently

- We added two bubbles similar to the Google Breathing Exercise
- One bubble is a breathing exercise the user can perform
- The other bubble is the actual persons breathing
- They change color depending upon accuracy of keeping up with the exercise
- Add light source to matching the theme with the original Google Breathing Exercise
- Future Plans
  - sounds for breath to the bottles with different levels of water
  - Better interaction with the object
  - Add control of changing mode for template

# Challenges

- New to Unity and thus had to learn it
- 3D Model
  - Initially want a balloon, but hard to find and not familiar with Unity
  - Chose to implement our own bubble instead
- Size Changing
- Color Changing

# User Study Design

- We wish to complete a within-subject experiment which entails participants to do a breathing exercise with the original VR breathing and with the new feature of the VR breathing
- We will observe their difficulties and how they react to each application
- Hypothesis for experiment:

*For our evaluation approach, we are hypothesizing that if we create a virtual reality that allows users to use the senses of sight and sound with a breathing exercise then the user will complete the exercise in a better manner of understanding and correctness. This hypothesis will serve as our goal and projected outcome for this project.*

# User Study Design – Survey

- In addition we will send out a post survey to the participants in order to understand the pros and cons of our design
- This way we can use our observations from the experiment along with the survey to make any adjustments necessary to the design

## VR Breathing Survey

Post Experiment Survey to gauge understanding of your experience using our application.

Our VR Breathing program is helpful in terms of visualizing your breathing \*

	1	2	3	4	5	
Strongly Disagree	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	Strongly Agree

Have you ever used other Breathing programs? \*

☐ Yes

☐ No

# Conclusion

- We hope to encourage a fun way to utilize breathing
- This application can be used as a tool for those struggling with breathing to have a more interactive experience that utilizing visual aid

# Questions?

Thank you!
